

## ***Professional-Technical Program***

The Business Leadership program allows students to design an Associates of Applied Science Degree to fit their educational and professional goals by completing a set of Post Secondary Technical Certificates. The components of the AAS degree consist of four areas: a Post Secondary Technical Certificate in the Foundation Courses, a Post Secondary Technical Certificate in the General Business Core, two Post Secondary Technical Certificates selected from a rich mix of Professional-Technical Areas of Competence (PTAC), and completion of the General Education requirements for a total of 61 credits.

Successful completion in each of the Post Secondary Technical Certificate options will enable students to specialize in specific areas of interest for entry-level positions that meet their individual career goals. Placement in some of the courses in the Professional Technical Areas of Competence may be determined by college assessment tests or prior completion of prerequisites.
